

CaseBridge

One interview. Five applications. Zero data leaks.

CPP AI Hackathon 2026

The Problem

60–70%

of a social worker's time goes to paperwork

What happens today:

- ▶ 45-min intake per client
- ▶ Check 5+ programs manually
- ▶ Fill each form by hand
- ▶ Repeat 15–20 times per day

What it costs:

- ▶ 15+ hours/week on admin alone
- ▶ Eligible families miss programs
- ▶ Clients wait weeks for help
- ▶ 40% annual caseworker turnover

What CaseBridge Does

THE WORKFLOW

Conversation

Eligibility Check

Filled Applications

1

Interview

The caseworker describes the client's situation in plain language. CaseBridge asks smart follow-ups to capture every required field.

2

Screen

Checks eligibility for 5 California benefit programs using consistent rules — same input always gives the same answer.

3

Generate

Produces pre-filled application PDFs for every program the client qualifies for. Ready to print and submit.

Works in **140+ languages** · Runs **entirely on your own computer** · Caseworker reviews everything

Live Demo

casebridge.live

New Case → Interview → Review → Eligibility → Applications

What to watch for:

AI asks the right questions

Walks through 15 fields
one at a time, naturally

Eligibility with reasons

Clear pass/fail for each
program, not a black box

Real filled PDFs

Government-style forms
with client data populated

Powered by Google's Gemma 4

What is Gemma 4?

Google's latest open-source AI model, released April 2026.

- ✓ Runs on a single GPU — no cloud needed
- ✓ Speaks 140+ languages natively
- ✓ Apache 2.0 license — free, no vendor lock-in
- ✓ Powers the interview, extraction, and risk detection

What this means for social workers:

The AI that interviews clients and fills forms runs on the computer in front of you.

No data goes to Google, OpenAI, or anyone else. Ever.

- ✓ Data in memory only — nothing saved
 - ✓ Works fully offline (verified)
 - ✓ HIPAA-ready architecture

Impact

90%

time saved

5

programs

**1 caseworker × 20 clients/day × 45 min saved
= 15 hours/week back with clients**

SDG 1 Poverty — benefits access
140+ languages

SDG 3 Health — WIC enrollment
SDG 11 Communities — local resources

SDG 10 Equality —

Why CaseBridge Wins

Others do one thing. **CaseBridge** does all three — and runs locally.

	AI Interview	Eligibility	Filled PDFs	Runs Locally
mRelief (OpenAI)	✓ SNAP only	✓ SNAP only	—	—
Single Stop	—	✓	—	—
findhelp	—	—	—	—
Eleos / Freed AI	✓ clinical notes	—	—	—
Apricot / CaseWorthy	—	—	—	—
CaseBridge	✓ 5 programs	✓ 5 programs	✓	✓

Why now: Google released Gemma 4 in April 2026 — the first open model fast enough for real-time local conversation. Before this, local AI was too slow.

Our moat: No competitor runs AI offline. The state-specific rules engine is hard to replicate. First-mover advantage in local-AI social work.

Market & Next Steps

The opportunity:

700,000 social workers in the US

3,100 county human services offices

25,000+ nonprofit benefits navigators

Business model:

Price \$50 / caseworker / month

Savings \$375 / week in labor saved

ROI **7.5x return** for the agency

Adopt Free 3-month pilot to prove ROI

Benefits Data Trust + Nava PBC are spending \$3M in Gates/Google.org funding to *explore* whether AI can help navigators. CaseBridge already does it.

Deployment roadmap:

Phase 1 Pilot: 1 LA County DSS office
5 caseworkers, 3 months

Phase 2 Scale: 5 California counties
County-specific program rules

Phase 3 CDSS state-wide partnership
Compliance certification

Phase 4 Open-source the rules engine
Other states bring their own rules
